INTRODUCTION

This DOD(HA) Health Service Regional Tricare Cost Summary Report utilizes data provided from the Tri-Service CHAMPUS Statistical Database Project's (TCSDP) Consolidated Budget Record (CBR) files. The report summarizes and compares, by DOD(HA)-designated Health Service Regions, the previous five fiscal years (FY 1990-FY 1994) of Army, Air Force, and Navy CHAMPUS payments and workload for all types of claims (institutional, handicapped, dental, inpatient and ambulatory professional services, and drug transactions). In separate sets of appendices, FY 1990 data was compared with FY 1991 data (B9091 through G9091), FY 1992 was compared with FY 1993 (B9293 through G9293), and FY 1994 was reported on an individual basis (A94 through G94). FY 1990-FY 1993 data summaries are contained in Volume I of this report; FY 1994 appendices are in Volume II.

The DOD(HA) 5-digit zip code cross map to region data file, as well as the TCSDP's supplemental 3-digit zip code and billable MTF cross reference files, were used to assign region codes to the CBR data records. Figure 1 (pp. 6-7) contains the map designating geographical boundaries for each region as defined in the 18 September 1994 update to the Defense Medical Information System (DMIS), Catchment Area Directory, U.S. and Puerto Rico Inpatient. To conform with DMIS's most recent region delineations as shown on the map, this publication separates Alaska and Puerto Rico out into individual areas distinct from Regions 01 through 12, and from Region 00 which is designated for areas unassigned to any region. In addition, for beneficiaries living in the state of Nevada, the report incorporates those CHAMPUS claims into Region 07 rather than into previously defined areas of Regions 09 and 10. These major regional boundary adjustments were uniformly made to all data utilized by this study in order to present current regional designations and also to allow for accurate comparisons of regions between time periods. Two corresponding publications preceded this study and were reported in the Health Services Command Publications DOD(HA) Health Service Regional Tricare Cost Summary, Fiscal Periods July 1991 - June 1993, RP 94-003, DTIC: AD A274 991, December 1993 and DOD(HA) Health Service Regional Tricare Cost Summary, Fiscal Periods January 1992 - December 1993, RP 94-014, DTIC: AD A278 507, April 1994. Comparisons between the prior publications and this report were omitted due to differences in the segmenting of time periods.

Besides regions, the report's appendices also segregate each region's cost and workload information into twenty-six clinical categories, such as Endocrinology, ENT (Ear, Nose, Throat), and General Surgery. These clinical categories were created by assignment through an ICD-9-CM primary diagnosis code to clinical category mapping file. The mapping file logic was based on the CHAMPUS ICD-9-CM Diagnosis Code Assignment to Hospital Specialty methodology published in the 1989 User's Guide For The CHAMPUS Workload Reports.

Detailed reports separating out government cost and workload by specific types of services (i.e., all services combined, institutional, inpatient professional services, ambulatory professional services, CHAMPUS Handicapped Program, prescription services) are located in Appendices B9091-G9091, B9293-G9293, and B94-G94. These appendices are additionally sorted and listed by clinical category within region. Each appendix has a summary for totals which collapses all clinical category data by region, and then all regions and clinical categories together. At the clinical category level, totals for each of the annual time periods are presented with the difference between the two totals. The G Appendices (drug costs and workload) are a new addition to this report. While each region's workload for the prescription activity is reported in the B Appendices tables under the "Other (Not Elsewhere Classified)" category, the associated drug costs for that workload are consolidated in with the region's total costs in that "Other" category. The G Appendices correct this problem of not being able to distinguish the Vendor/ Beneficiary drug costs by relisting the number of drug services by region and showing their associated cost.

METHODS

Methodology will be explained using the set of appendix tables for FY 1990 compared with FY 1991 (A9091-G9091). That methodology will then be shown to directly apply to the FY 1992/1993 appendices, and, with modification, to the FY 1994 data as well. To extract FY 1990 paid claims (October 1989-September 1990), a 24-month processing period (from October 1989-September 1991) was used due to the significant time lag between when a CHAMPUS claim is authorized for payment and when it is approved, processed, and accepted into the OCHAMPUS database. Claims can be paid by OCHAMPUS and still be denied entry into the database. Administrative holdups - such as transmitting a claim back to the fiscal intermediary because of insufficient information - help defer admission into the system. However, once processed into the OCHAMPUS database, each month's newly entered claims are transmitted to the TCSDP as that month's claims processing files.

Based on FY 1990 payment dates, some of the FY 1990 expenses used in this report were taken from the twelve FY 1990 monthly processing files. The remaining expense data for FY 1990 were extracted from the twelve FY 1991 monthly processing files, utilizing only those claims with FY 1990 payment dates. In a corresponding manner, the FY 1991 paid claims file was created for this report.

The methodology of using the succeeding twelve months of processing files to supplement a year's expense data alleviates the problem of lag time between claim payment and acceptance into the OCHAMPUS database. Thus, an accurate representation of cost

and workload was derived for each of these two fiscal years, based upon when the claims were actually paid. The same methodology holds for the set of appendices for FY 1992 compared with FY 1993; each of these fiscal years used twenty-four months of processing data from which were collected the applicable twelve months of government payments.

The FY 1994 data available for this report do not have the advantage of having twelve follow-up months of processing data (i.e., the FY 1995 files) from which to extract supplemental government expense claims paid in FY 1994. This report was assembled immediately following the TCSDP's receipt of the September FY 1994 processing files, so those twelve months of FY 1994 processing data were all of the FY 1994 data that were available. Some of that data was used to augment the FY 1993 payments file with additional claim payments made in FY 1993 but not processed into the database until FY 1994. The FY 1994 monthly processing data also contained FY 1994 government expense data which were extracted into a separate FY 1994 payment file. However, the actual data necessary to complete the FY 1994 expense file can not be obtained until the upcoming FY 1995 monthly processing files are available.

With only a twelve-month base of input processing data for FY 1994 payment files, mathematical adjustments to the FY 1994 partial payment data needed to be calculated and applied to the data. The reasoning behind making such modifications was to provide reasonable projections of FY 1994 government expense activity, and also to facilitate the capacity for comparisons between FY 1990-1994 annual data.

The Net Marginal Growth Rate Adjustment Factor (NMGRAF) conversion program was employed to compute the multiplicative adjustments. It uses data from the three monthly processing periods subsequent to June 1993 and June 1994 (i.e., July-September 1993 and July-September 1994) to calculate the NMGRAF multiplier values and apply them to FY 1994 data within each region and type of claim. This application of the conversion program to FY 1994 data provides an accurate forecast of complete FY 1994 government expenses and also provides a good basis for reliable comparisons among FY 1990-1994 yearly data. Appendix A94 contains more information on the stages performed in computing the Net Marginal Growth Rate Adjustment Factors and includes all tables produced by the conversion program (Appendix A94, pp. A94-1-10).

RESULTS

Tables 1-2 (pp. 6-9) show the current year to previous year summary comparison results for FY 1990/1991 and FY 1992/1993. Individual FY 1994 summary data, after application of the Net

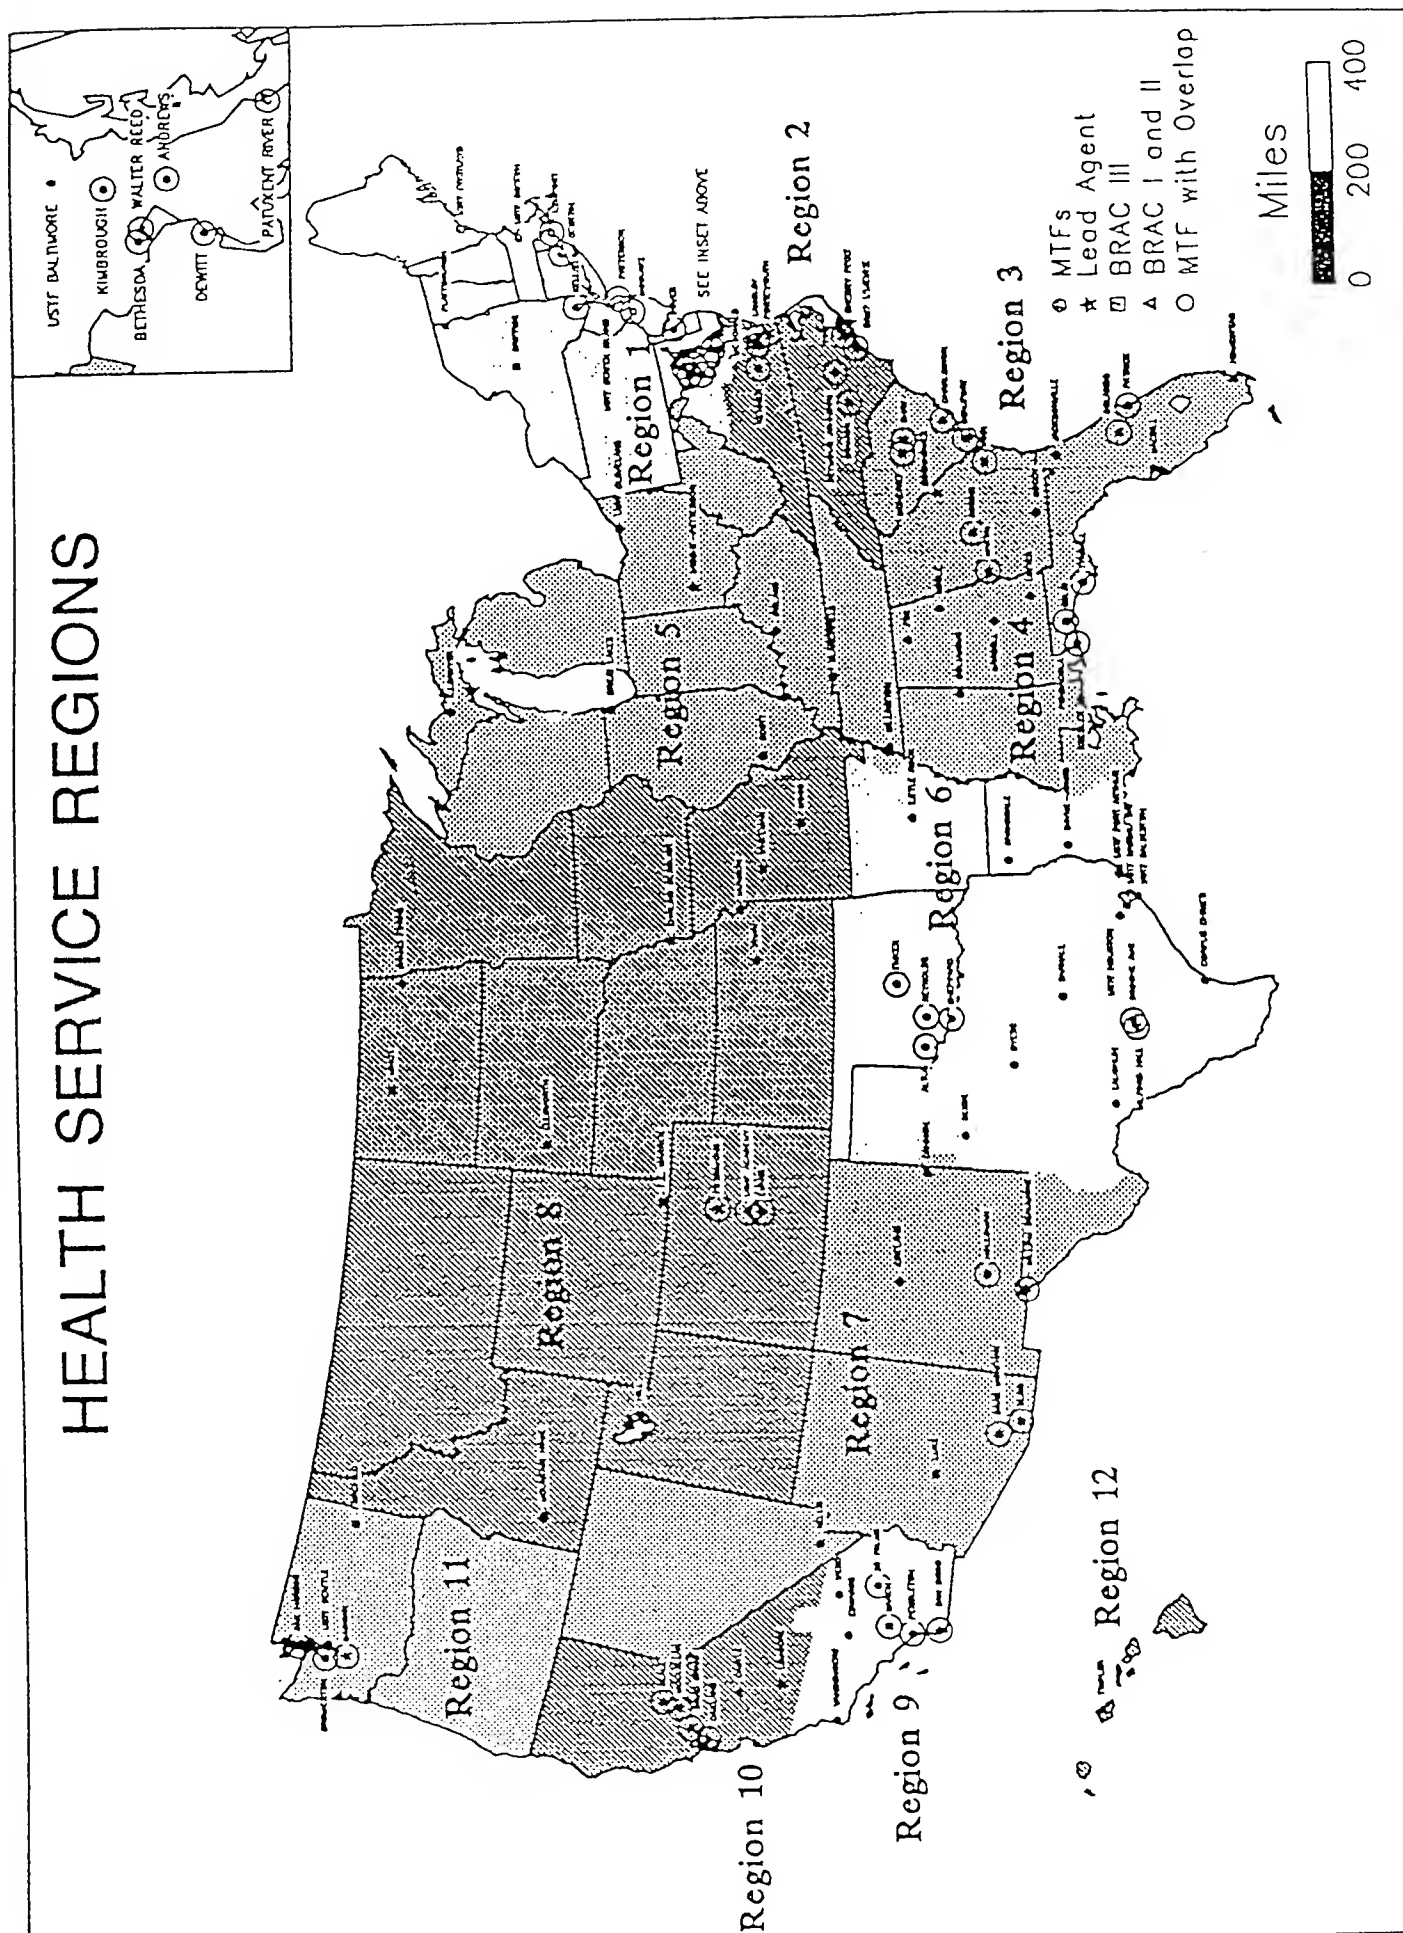

Marginal Growth Rate Adjustment Factors to the incomplete file of FY 1994 government payments data, is presented as Table 3 (p. 10). Table 4 (p. 11) consolidates Tables 1-3 summary totals of all regions' total CHAMPUS costs and workloads for FY 1990-1994.

For all claim types and regions FY 1990/1991 showed increases in government cost and all workload indicators, except for a slight decrease (-1.1% or -3,446) in number of admissions. It should be noted that despite the decrease in admissions, the number of bed days increased 144.2% (1.6 M) over the same period of time. Since FY 1991 however, estimated total government payments have declined each year, with an overall -7.5% (\$-217.4 M) decrease from FY 1991 to FY 1994. The decrease in payments from FY 1993/1994 was nearly \$39.7 M or -1.5%. Number of admissions has also continuously declined each year, with a -21.7% (-69,581) overall decrease from FY 1991 to FY 1994 and -7.6% (20,569) decline from FY 1993/1994. Except for the large increase in bed days from FY 1990/1991, this workload indicator has declined each year, with an overall decrease of -38.2% (-1.0 M) from FY 1991 to FY 1994 and -10.9% (-198,736) from FY 1993/1994. The number of professional services remained fairly constant from FY 1991 to FY 1993, but then had a positive change of 6.5% (2.5 M) from FY 1993/1994. Number of professional visits showed a similar pattern to that of professional services and increased 7.7% (1.0 M) from FY 1993/1994. Prescription (RX) services showed a tremendous increase from FY 1990/1991 (263.6% or 12.7 M), then experienced -40.8% (-7.1 M) and -47.4% (-4.9 M) declines in the next two years respectively. Between FY 1993/1994, the number of RX services increased again by 11.6% or 631,635.

APPENDIX A9091

FY 1990 COMPARED WITH FY 1991
NET MARGINAL GROWTH RATE ADJUSTMENT FACTOR

APPENDIX A9091

Net Marginal Growth Rate Adjustment Factor Tables

To extract FY 1990 (October 1989-September 1990) paid claims, a 24-month processing period (from October 1989-September 1991) was used due to the significant lag times between when a CHAMPUS claim is authorized for payment and when it is approved, processed, and accepted into the OCHAMPUS database. Claims can be paid by OCHAMPUS and still be denied entry into the database. Administrative holdups - such as transmitting a claim back to the fiscal intermediary because of insufficient information - help defer admission into the system. However, once processed into the OCHAMPUS database, each month's newly entered claims are transmitted to the TCSDP as that month's claims processing files.

Based on FY 1990 payment dates, some of the FY 1990 expenses used in this report were taken from the twelve FY 1990 monthly processing files. The remaining expense data for FY 1990 were extracted from the twelve FY 1991 monthly processing files, utilizing only those claims with FY 1990 payment dates. In a corresponding manner, the FY 1991 paid claims file was created for this report.

The methodology of using the succeeding twelve months of processing files to supplement a year's expense data alleviates the problem of lag time between claim payment and acceptance into the OCHAMPUS database. Thus, an accurate representation of cost and workload was derived for each of these two fiscal years, based upon when the claims were actually paid. As a result, no adjustment or modification (through Net Marginal Growth Rate Adjustment Factors) to this file data was necessary before use in production of the B9091-G9091 appendices.

APPENDIX A9293

FY 1992 COMPARED WITH FY 1993
NET MARGINAL GROWTH RATE ADJUSTMENT FACTOR

Net Marginal Growth Rate Adjustment Factor Tables

To extract FY 1992 (October 1991-September 1992) paid claims, a 24-month processing period (from October 1991-September 1993) was used due to the significant lag times between when a CHAMPUS claim is authorized for payment and when it is approved, processed, and accepted into the OCHAMPUS database. Claims can be paid by OCHAMPUS and still be denied entry into the database. Administrative holdups - such as transmitting a claim back to the fiscal intermediary because of insufficient information - help defer admission into the system. However, once processed into the OCHAMPUS database, each month's newly entered claims are transmitted to the TCSDP as that month's claims processing files.

Based on FY 1992 payment dates, some of the FY 1992 expenses used in this report were taken from the twelve FY 1992 monthly processing files. The remaining expense data for FY 1992 were extracted from the twelve FY 1993 monthly processing files, utilizing only those claims with FY 1992 payment dates. In a corresponding manner, the FY 1993 paid claims file was created for this report.

The methodology of using the succeeding twelve months of processing files to supplement a year's expense data alleviates the problem of lag time between claim payment and acceptance into the OCHAMPUS database. Thus, an accurate representation of cost and workload was derived for each of these two fiscal years, based upon when the claims were actually paid. As a result, no adjustment or modification (through Net Marginal Growth Rate Adjustment Factors) to this file data was necessary before use in production of the B9293-G9293 appendices.
